

Rootonic

VITAMIN SEA

Rootonic promotes the development of the root system

Fertilizer Group (f) Min. Dec. 257921/2004
Marketing Authorization No. 224

What is Rootonic?

Rootonic is a liquid root biostimulant derived from fresh raw materials of marine origin (sea fish) via smooth and natural process. It contains amino acids, natural hormones, B-complex vitamins, humic-fulvic acids and macronutrients.

Due to its composition, it is easily and rapidly assimilable by plants.

ph: 5.2 | EC: 2300 μ S/cm | Specific weight: 1.150 g/L | 100% water soluble | Appearance: Black Dark

Method of Application & Dosage

Rootonic promotes the development of the root system.

Seed immersion: 100 cc in 100 liters of water for up to 15min

Roots immersion: 1 liter in 100 liters of water up to 5min

Plant nurseries: via watering 1 liter in 1000 liters of water

Transplantation: 10-15 lt/Ha

Fertigation: 10-15 lt/Ha

Foliar application: 250-350cc in 100 liters of water

Why do we choose Rootonic?

- Improves seed germination capacity.
- Promotes the creation of a rich and healthy root system.
- Enriches the rhizosphere with beneficial microorganisms by enhancing their growth and multiplication resulting in improved soil structure and meeting the nutritional requirements of the crop.
- Increases the growth rate of plants and promotes their robustness throughout cultivation.
- Achieves rapid recovery of plants from transplanting stress, effectively reducing its adverse effects on their growth and enhancing their rapid and successful adaptation to the field.
- Makes immediately available to the plants the nutrients from the provided fertilization program but also those already present in the soil, increasing the efficiency of fertilization.
- Ensures the successful treatment of adverse conditions caused by biotic or abiotic factors in later stages of plant growth beyond transplantation, strengthening their root system and therefore their vitality.

Composition

During transplanting but also in later stages of plant growth, when they are threatened by pathogens or in conditions of abiotic stress that cause adverse growth conditions and strengthen the root system of plants is required.

pH: 5,2

Nutrient element	% w/w
Total Nitrogen (N)	5,7%
Nitric Nitrogen (N-NO ₃)	1,2%
Ammoniacal (N-NH ₄) + Ureic Nitrogen (N-NH ₂)	4,5%
Phosphorus (P ₂ O ₅) Soluble inorganic acids	3,1%
Potassium (K ₂ O)	1,2%
Organic Carbon (C)	4,3%
Organic Matter	38,9%
Amino Acids	757 mg/100g
Vitamin B1	0.0323 mg/kg
Vitamin B2	0.0469 mg/kg
Vitamin B3	7.48 mg/kg
Vitamin B6	0.554 mg/kg

The product also contains Humic and Fulvic Acids and Natural growth regulatory substances.
